

Reporting Summary WP3

15.07.21 – 31.12.21

For the given timeline, further progress can be documented within WP3. In preparing for the Workshop in Halle (08. – 12.11.2021), modules have been developed as a guide on what partners can work on during and after the workshop and what results should be seen as a Outcome of this modules. Therefor three modules have been developed by MLU and two by Univations. Along this modules, a detailed timetable was brought together for the Workshop within Halle, which included presentation from several colleagues from our institution, for a variety of topics and discussions. Regarding the Corona-Pandemic, we heavily discussed on hygiene standards and provided testing options during the Workshop. As it could be in presence, we encouraged the Kosovo partners to think about how the topics given can be implemented in the Modules of each institution and brought into teaching by professors and teachers. With an outlook to the Workshop in Pristina in Spring of 2022, Ideas have been provided how different ways of implementations can be done.

As all the participants had the possibility to experience and get in contact with different technologies used in the healthcare- and care section, evaluations forms helped to understand how they can be used for different purposes and in different settings, this was also a contribution to further develop the Equipment List in this project. A Post Reflection Meeting presented the outcome of the Feedback Survey and discussed open questions and further steps. In preparation for the Workshop in Pristina, we collected detailed task, that are discussed in monthly meetings from December on, for the Partners to prepare and have the best outcome in this upcoming Workshop.
